DATA CENTER BINGO

Five safeguards.
Every one required.

FACILITY / ADDRESS _____

PROJECT PHASE _____

12-MONTH REVIEW PERIOD _____

B

Breathing & health

AIR + SOUND

PM2.5 / NO2
Engine emissions
Noise at homes

Limits, measurements and corrective action

○ **VERIFY TO MARK**

I

Invest in clean power

CLIMATE + ENERGY

Hourly clean supply
Total MWh + CO2e
Flexible computing

100% hourly matching; all energy counted

○ **VERIFY TO MARK**

N

Nurture nature

WATER + MATERIALS

Water + drought
Peak demand
Equipment reuse

Water budgets met; waste destinations traced

○ **VERIFY TO MARK**

G

Guarantee a fair deal

COSTS + JUSTICE

Grid + water costs
Taxes + incentives
Local protections

Binding agreements; payments verified

○ **VERIFY TO MARK**

O

Open the evidence

DATA + ACCOUNTABILITY

Public source records
Independent review
Dated findings

Every gate auditable; missing data stay missing

○ **VERIFY TO MARK**

5 OF 5 VERIFIED = BINGO

No free square. No averaging. One missing or unmet gate means no BINGO.

Use pages 2-4 before marking. Proposed safeguards, not proof of zero harm or legal certification.

What earns each letter?

Each gate requires every condition below. Sources explain the methods; this kit proposes the pass rules.

B Breathing & health

01 Publish enforceable emissions and community-noise limits, named receptors, averaging periods, and actions for exceedances. Include every generator, startups and emergency runs.

02 Provide independent air modeling, quality-assured neighborhood measurements and representative day/night noise results. Use a 12-month baseline or disclose an independently accepted alternative.

03 For the review year, demonstrate compliance and no unresolved breaches of these commitments. Investigate community complaints and protect workers from noise exposure.

MEASURE / SOURCE BASIS [1, 2]

PM2.5 (micrograms/m3); NO2 (ppb); pollutant mass (kg or tons/year); generator hours; day/night sound (dBA, with tonal/low-frequency assessment).

BRING THE EVIDENCE

Permits; stack tests; fuel/control logs; monitor QA records; sound study; complaint resolutions. Worker noise limits are not residential limits.

I Invest in clean power

01 Match 100% of total facility electricity in every hour with additional, deliverable carbon-free generation or traceable stored clean electricity. Include cooling and fossil backup in the energy boundary.

02 Retire unique energy attributes; avoid double counting. Account for storage losses and charging sources. Annual certificates alone do not meet this proposed gate.

03 Publish total electricity, physical emissions estimates and representative-task efficiency. Demonstrate flexible computing with net emissions accounting that includes restart and deferred-work overhead.

MEASURE / SOURCE BASIS [3]

MWh/hour; unmatched MWh; peak MW; location-based and backup tCO2e; kWh/equivalent task.

BRING THE EVIDENCE

Hourly meters; supply/attribute records; storage ledger; emissions factors; task trials. Matching does not establish grid independence.

Complete the whole line.

A benefit in one category cannot erase an unmet requirement in another.

N Nurture nature

Meet a public, locally reviewed water budget for annual withdrawal, consumptive use and peak demand; implement drought curtailment triggers. Meter water by source and show conservation at comparable service levels. Disclose land impacts and lifecycle equipment impacts. Trace all retired servers and batteries to documented reuse or certified recycling, with regulated residuals separately accounted for.

Measure [4, 5]: m3/year withdrawn and consumed; peak m3/day; WUE (L/kWh of IT energy); equipment mass and destination.

Evidence: Water meters/balance; basin assessment; binding supply/drought terms; land approvals; reuse and waste manifests.

G Guarantee a fair deal

Execute and honor agreements assigning attributable grid and water infrastructure costs to the operator, backed by financial security for early closure or lower demand. Publish taxes, concessions and every payment by recipient and year. Fund independently governed monitoring and remedies, including affected neighboring communities. Payments must not replace environmental compliance.

Measure [6]: Upfront dollars; annual dollars x years; public subsidy value; incremental costs; collateral; payments due vs. paid.

Evidence: Signed contracts; regulator-approved tariffs; fiscal analysis; receipts; security instruments; community governance terms.

O Open the evidence

Publish source-linked metrics, thresholds and results with units, dates, methods and uncertainty. Release monthly data within 30 days; material incidents within 24 hours. Require independent annual review with conflicts and funding disclosed. Provide accessible comments and complaint tracking. Use only aggregate health data with privacy protections.

Measure [1, 7]: Data completeness; reporting delay; unresolved findings; last independent review date.

Evidence: Open dataset; source index; reviewer report; corrections log; public participation record.

Evidence earns the stamp.

This is a proposed accountability rubric. It is not a validated health-risk score, permit approval, or agency endorsement.

THE FIVE-GATE RULE

Verified: every requirement met, with source evidence and an independent reviewer.
Not yet verified: missing, outdated or incomplete evidence.
Not met: documented failure of a requirement.

BINGO requires five Verified gates. No partial-credit award, offsets between gates, or free square. Unknown is not evidence of harm, but it cannot earn a letter.

ONE FACILITY. ONE REVIEW PERIOD.

Name the campus, operator, address, phase and 12-month operating period. Planned/construction projects can show commitments, not an operational BINGO. Reassess annually; withdraw the claim after a material failure. Company-wide claims require a complete facility inventory and every operating facility to pass, with other phases listed separately.

THRESHOLDS BEFORE RESULTS

Record site-specific air, noise and water limits before rating. Name the authority or binding agreement, units, averaging period and consequence of a breach. Where a necessary threshold is absent, leave the gate unverified. The 100% hourly target, review period and release deadlines here are proposed policy choices, not universal legal requirements.

REVIEWER / ORGANIZATION / CONFLICT DISCLOSURE

Review date: _____ Next review: _____

METHOD REFERENCES / CHECKED 18 OCT 2026

[1] EPA. Frequent Questions About Air Sensors.
Measurement quality, calibration and interpretation; a sensor alone does not identify a source.

[2] CDC/NIOSH. Occupational vs. General Environmental Noise.
Workplace limits must not be used as neighborhood sleep-protection thresholds.

[3] EPA. 24/7 Hourly Matching of Electricity.
Time, location and unique electricity attributes matter. The full pass rule is our proposal.

[4] DOE/FEMP. Cooling Water Efficiency Opportunities.
WUE uses site water in liters divided by IT electricity in kWh. Publish the water boundary.

[5] EPA. Certified Electronics Recyclers.
R2 and e-Stewards provide independent recycling certification frameworks.
